

GarageDoorMinder™ Notification Lightstick

To add this notification lightstick to your GarageDoorMinder® system:

1) Operation manual for light stick and receiver

-LED's will blink once, when power is on

-LED's will continuously blink when door is open and stop blinking when door is closed.

-Deactivate beeper option.

This option is set if you press & hold the button for 1~3 seconds. You will see the first LEDs come on, then let go now beeper function is disabled (OFF)

-Activate beeper.

This option is set if you press & hold the button for 4~7 seconds. You will see 1st and 2nd LEDs light up when you see 2nd LED light up let go of button. Beeper is now activated (ON)

-Enter pairing mode.

This option is set if you press & hold the button for 8~11 seconds. You will see the 1st, 2nd and 3rd LEDs come on. Release button after the 3rd LED comes on. You are now in pairing mode. The receiver can now pair with transmitter which must be within 12 inches during pairing mode. Turn transmitter label facing down to mimic door open. Light stick receiver will blink 3 times when device are paired. For pairing multiple light stick receivers repeat steps for each one. Also for multiple Transmitter paired with light stick receivers repeat same steps. Pairing mode will reset back to default after 30 seconds.

-Reset and clear all paired devices.

This option is set if you press & hold the button over 20 seconds. When released the first and fourth LEDs are on. The 2nd and 4th lights will go out on their own. The receiver light stick is reset.

Must be plugged in
while programming
